

CADAC Studio Installation

CADAC Studio is hosted on Microsoft Windows operating systems.

After downloading **CADAC Studio** you get three folders: **KPLOT** for plotting and stochastic analysis, **SWEEP** for footprint and launch envelope generation, and **SWEEP++** the preprocessor to SWEEP for C++ simulations. To install the three programs, just click on the respective 'setup' file. You access KPLOT at C:\Program Files (x86)\CADAC Studio\KPLOT (similar for SWEEP and SWEEP++).

CADAC Studio plots the CADAC++ output in two- and three-dimensions and displays the stochastic Monte Carlo data in histograms, CEP, and error ellipses.

CADAC++ also provides CSV (Comma Separated Variables) data files for plotting with MATLAB®, SCILAB, EXCEL and others.

The KPLOT/Globe plotting program is no longer part of CADAC Studio. To enable the Globe plotting program, request the `globe.exe` by sending a micro SD memory card to Peter Zipfel, 73 Country Club Rd, Shalimar, FL 32579, USA. I will return your memory card loaded with the `globe.exe` free of charge.
